Investment Strategy

It is a long-term value investment quantitative strategy, model driven, based on both fundamental and statistical analysis to capture the inner value of the assets.

For the two combined analysis a few indicators are considered and weighted in a Fuzzy Logics approach. Once selected the Investable Universe, a ranking of the instruments is created and only the top ones are considered as if we invest on them forever. A very last subjective supervision completes the decision-making process, despite the human intervention is reduced at the minimum. A few strategic layer positions can be created with a long-term horizon and an expected predefined distribution of cash flows.

It is a Long Only Strategy, with a Long-Term horizon, low/zero turn-over, and potential Leverage limited to a maximum of 30% of the NAV.

FX risk is USD, EUR, GBP and it is not hedged.
